POOJA SHREE

Rameswaram, Tamil Nadu | +91 93449 18773 | poojashreerevathi@gmail.com | linkedin.com/in/poojashree-s16 | poojashree-portfolio.vercel.app

PROFESSIONAL SUMMARY

Final-year B.Tech AI & Data Science student with 4 complete data projects spanning banking, healthcare, and AI job markets. Proficient in Power BI, MySQL, Python, and Excel — with a track record of turning complex datasets into clear, decision-ready insights. Seeking a Data Analyst role to deliver measurable business value through data.

EDUCATION

Sethu Institute of Technology — Tamil Nadu, India
B.Tech – Artificial Intelligence and Data Science | CGPA: 8.17/10 — 2022 – 2026

National Matriculation Higher Secondary School — Tamil Nadu, India
12th: 74% | 10th: 72%

PROJECTS

AI Jobs Market Intelligence Dashboard | *Power BI, MySQL, Excel*

- Engineered a comprehensive Power BI dashboard examining global AI job market trends, salary benchmarks, and remote hiring patterns across 1,500+ AI job postings.
- Queried MySQL databases to surface insights on AI salaries by role, top hiring locations, demand scores, and remote vs on-site distribution.
- Created 10+ interactive visualizations — tree maps, choropleth maps, stacked bar charts, and KPI cards — to track AI hiring trends and in-demand roles.
- Uncovered that the top 5 hiring countries account for 70%+ of global AI postings, with remote AI roles growing at 40%+ — presented as executive-ready visual report.

ATM Cash Usage Analytics Dashboard | *Power BI, MySQL, Excel*

- Constructed an interactive Power BI dashboard to examine ATM transaction patterns, cash withdrawal volumes, and failure rates across 2,000+ banking records.
- Executed SQL queries to pinpoint top 10 high-usage ATMs, city-wise transaction volumes, and failure rate breakdowns — reducing ad-hoc reporting time by 50%.
- Designed KPI cards, slicers, and drill-through visuals enabling stakeholders to monitor ATM activity and location-wise usage in real time.
- Identified urban ATM clusters with 3x higher failure rates, giving the business a clear target for infrastructure improvement.

Hospital Bed & Patient Monitoring Analytics | *Python, Pandas, Power BI, Statistical Analysis*

- Examined 10,000+ patient records to detect abnormal vital sign patterns, enabling early identification of critical cases with 94% detection accuracy.
- Cleaned and pre processed raw hospital data; applied feature engineering and threshold logic to flag abnormal SpO_2 and heart rate — cutting review time by 40%.
- Delivered a 6-KPI Power BI dashboard adopted by clinical staff to monitor bed occupancy and health status across hospital departments.

IoT-Based IV Fluid Monitoring & Patient Health Tracking System | *ESP32-S3, MQTT, Firebase, React Native | Final Year Project*

- Architected a real-time healthcare IoT system using ESP32-S3 sensors to continuously measure IV fluid levels and critical health metrics across 5+ patients simultaneously.
- Established a real-time data pipeline via MQTT protocol, cutting alert response time to under 1 second and reducing manual nurse monitoring effort by 35%.
- Shipped a cross-platform React Native mobile app displaying live patient vitals with instant critical alerts for medical staff.
- Configured Firebase cloud storage to ensure zero data loss and sub-second sync across all connected monitoring devices.

TECHNICAL SKILLS

Data Analysis & BI: Power BI,SQL (MySQL), Excel (Pivot Tables, VLOOKUP, Power Query), EDA, Statistical Analysis
Programming & Libraries: Python (Pandas, NumPy, Matplotlib, Seaborn), Feature Engineering, Data Modeling
Databases: MySQL, Query Optimization
Tools & Platforms: Jupyter Notebook, Git, Streamlit, Google Colab, MS Excel
