PROFESSIONAL SUMMARY

AI & Data Science graduate with hands-on experience delivering analytics and dashboard projects across healthcare, banking, and AI job market domains using Power BI, SQL, Python, and Excel. Built interactive dashboards for ATM transaction analysis, healthcare monitoring simulations, and AI hiring trend analysis using public and synthetic datasets ranging from 1,500+ to 2,000+ records. Skilled in data cleaning, SQL querying, visualization, and transforming raw datasets into clear, decision-oriented reports and analytical insights.

EDUCATION

Sethu Institute of Technology

B.Tech – Artificial Intelligence and Data Science | CGPA: 8.17/10

Tamil Nadu, India

2022 – 2026

PROJECTS

AI Jobs Market Intelligence Dashboard | Power BI, MySQL, Excel

- Built a multi-page Power BI dashboard analysing 1,500+ AI job postings sourced from public Kaggle datasets, covering salary benchmarks, hiring trends, and remote vs on-site distribution
- Wrote MySQL queries to extract and segment data by role, location, and demand score — enabling structured comparison across job categories
- Designed 10+ interactive visualisations — treemaps, choropleth maps, stacked bar charts, and dashboard cards — giving users drill-down visibility into global AI hiring patterns
- Surfaced insight that the top 5 hiring countries concentrate 70%+ of global AI postings, with remote roles growing as a share of total listings

ATM Cash Usage Analytics Dashboard | Power BI, MySQL, Excel

- Developed an interactive Power BI dashboard to analyse ATM transaction patterns, cash withdrawal volumes, and failure rates using a public Kaggle banking dataset of 2,000+ records
- Wrote SQL queries to segment data by ATM location, city, and failure type — surfacing which clusters had the highest usage and error rates
- Built slicers, drill-through pages, and dashboard cards enabling stakeholders to filter activity by location and time period in real time
- Practised a full analytics workflow — data extraction, SQL querying, Power BI modelling, and dashboard publishing — simulating a real banking reporting environment

Hospital Bed & Patient Monitoring Analytics | Python, Pandas, Power BI, Statistical Analysis

- Designed a healthcare analytics dashboard in Power BI to simulate patient vital monitoring, ICU bed occupancy tracking, and abnormal health condition flagging
- Generated structured synthetic patient datasets using Python (Pandas, NumPy) to replicate realistic healthcare monitoring scenarios for dashboard testing
- Applied threshold-based logic to flag abnormal SpO₂ and heart rate readings, demonstrating how rule-based monitoring can support clinical decision workflows
- Delivered a healthcare dashboard covering bed occupancy, vitals status, and department-level health summaries — designed to simulate a real hospital reporting use case

IoT-Based IV Fluid Monitoring & Patient Health Tracking System | Flutter, Firebase, ESP32-S3 | Final Year Project

- Developed a cross-platform mobile application in Flutter connected to Firebase Realtime Database for tracking IV fluid levels and patient vital signs across multiple device sessions
- Built screens for patient monitoring, alert notifications, device status, and patient history — with Firebase-powered real-time updates and push alert delivery
- Configured Firebase Realtime Database to sync live sensor data from ESP32-S3 hardware modules, enabling sub-second data refresh for monitoring and alert triggers

- Led UI/UX design and front-end development as part of a team project; coordinated with hardware members on ESP32-S3 sensor integration and end-to-end system testing

TECHNICAL SKILLS

Data Analysis & BI: Power BI, SQL (MySQL), Excel (Pivot Tables, VLOOKUP, Power Query), EDA, Statistical Analysis

Programming & Libraries: Python (Pandas, NumPy, Matplotlib, Seaborn), Feature Engineering, Data Modeling

Databases: MySQL, Query Optimization

Tools & Platforms: Jupyter Notebook, Git, Streamlit, Google Colab, MS Excel

CERTIFICATIONS

- SQL Intermediate — HackerRank
- Python Basics — HackerRank
- Data Visualization — Kaggle
- Data Visualization with Power BI — Great Learning
- AI Primer & Data Foundation — Infosys Springboard
